

JavaScript Libraries

jQuery

jQuery Lazy Load: <http://www.appelsiini.net/projects/lazyload>

Bootstrap

Recommendations

Carousel: Royal Slider (<http://dimsemenov.com/plugins/royal-slider/>)

Lightbox for Images and Videos: iLightbox (<http://ilightbox.net>)

For Homepage Animation

refer to line 54 \$.get() for HTML and scripts required to load Homepage Animation

Activating and Deactivating Homepage Animation

path: js/scripts/scripts.js

line 25 and 26

```
load_animated_content(); //loads animated content
load_static_content();   //loads static content
```

Note about Background Images

note: initBackgroundResize function resizes the image to fill the width whereas window.picturefill() simply media query loads appropriate images based on viewport and data-span attribute

Style Guide

****Global****

.contrast - add to any text element (p, h1, span, etc) to color whitene

p.reduce-p-margin - reduces the margin-bottom on p tag

.header-for-copy-alt - for copy headers that are slightly larger and darker than the body copy

****CTA Button****

.button-pill &.btn-default &.btn

****Hero Space****

.hero-header - add to <H1> for font-size and line-height

&.contrast - add to <H1> for white font

&.no-shadow - remove shadow on text

.hero-sub-copy - add to <p> for font-size and line height

&.contrast - add to <p> for white font

&.no-shadow - add to <p> remove shadow on text

.homepage-slider-adjust - for mobile span tags that loads picture fill , this class adjusts such that the image starts from top left , after initBackgroundResize function has run

****Internal pages****

refer to installation-videos html for example

```
.internal-page {  
    &.container-fluid: to give correct left and right padding  
}
```

Landing page requirements:

case1: colored band

```
.internal{  
  
    &.color-band{  
        // two classes must be included  
    }  
  
    &.blue-contrast {  
        //for white breadcrumbs are washed out by picture  
    }  
}
```

define the color of the band as in-line style at **.shoppage-head**

.full-landing-width for images in mobile

add class **.full-width** in the wrapping **.container-fluid**

use **.full-width** in the wrapping **.container-fluid** to remove any padding

Quality Carousel

to optimize for mobile view

.bg-left-position : positions nested img tag to relative

&.by-20 : shifts left by 20 pixels

&.by-30 : shifts left by 30 pixels
